## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: Hahn (7064793) teaches a related object determination section utilizing a shift register section for determining noise. (Col 3 line 14-Col 4 line 56, Col 5 line 60-Col 6 line 62, Figs. 1-3) However no prior art references anticipate or suggest the limitations of "a noise removal determination section for determining whether or not a predetermined number of more of a plurality of results of the shift register section are equal to one another to determine whether or not the plurality of results are noise and wherein the predetermined number or more of the plurality of results of the shift register section represents a majority of shift register units of the shift register section, and if the majority of shift register units have the same result for the pixel, the pixel is determined to be part of an object to be extracted, but not noise" in combination with other claim limitations in independent claims 1, 13, 22 and 23. Claims 2-4, 7-12, and 14-21 are dependent on said independent claims and thus, are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided

by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Scott Elchert on April 17<sup>th</sup> 2007.

In the claim 23

Line 16, after "but not noise", insert '**wherein the processing operation section of the control apparatus reads out the object information, which has been extracted on a frame-by-frame basis, from the object information processing apparatus and compares the object information between each frame to detect movement or change of an object**'
